

Xplus II

ANALOG TO DIGITAL KIT

VisiConsult
X-ray Systems & Solutions

A modern digital camera is used as a replacement for an outdated analog camera in existing Image Intensifiers (II) to increase the quality up to FullHD. The VisiConsult setup is high speed, easy to connect and very cost efficient.

- **Save money:** No image enhancement system needed, that means no PC and no software, **only a TFT display necessary**
- **Easy setup:** Connect the camera with a **standard HDMI cable** directly to a TFT display. The **power supply of the Image Intensifier** can be re-used.
- **High resolution:** FullHD (1920x1080 Pixel) resolution of the camera ensures an x-ray resolution of minimum 1.8 / 2.2 / 2.5 LP/mm at Zoom 0 / 1 / 2
- **High speed:** Uto 60 frames per second for real-time inspection
